Business Redesign - Nicolas Gonzaba

Overall designing our website flowed very well and didn't run into too many problems. I feel like I had a lot more of my best work put into this assignment compared to my last group project. Part of this had to do with my partners having a lot more to do with my partners being very good to work with but I think I have also improved a lot with my coding and designing skills in the past few weeks.

In the figma I had helped by making Tablet and iphone versions of all the laptop pages while my partners worked on them. This helped immensely in completing the figma in a timely manner allowing us to have the figma done before the end of the first day. Additionally I had helped with figma redesign of our menu after our first design got rejected and made changes to the figma as we made edits to the website throughout the assignment. When it came to coding I had spent the most time designing the template for the menu page while Isaias worked on the data. I had also helped with the reformatting of the other pages so they more closely matched the Figma.

Overall I feel like I actually did put my best foot forward for this assignment and had a very enjoyable time working on it. It also acts as a good show of how my skills in HTML have improved over time.
