Business Redesign Write Up - Nicolas Gonzaba

Nicolas was a pleasure to work with. He was diligent in the completion of his tasks and had the desire and drive to pursue tasks without prompting. He took initiative on finding areas on which to improve. His primary tasks were figma collaboration (mainly tablet and mobile) and menu design.

There was no interpersonal friction involved. Nicolas was agreeable and collaborative in his approach. I appreciate his commitment to teamwork, as well as his innovative suggestions for website improvement. One such example of this was the addition of red banners behind category text for more visual interest.

Business Redesign Write Up - Isaias Gonzalez

Isaias is a brilliant coder. He was responsible for almost the entirety of the Javascript code used. He decided to create a JSON file from scratch that included all menu items, prices, and descriptions and inject that code in the proper category upon click. It is an impressive design. I studied the code to try to learn the method but it's still a bit too advanced for me to grasp in entirety. Isaias was also responsible for adjusting some of the page styling across the board, resulting in a more visually appealing layout overall.

I did have some worry about whether this task would be completed in time, as it was a tremendous undertaking. But this morning (12/5/25) one large commit was pushed through that completed the functionality of our site. Overall, working with Isaias is a positive experience. Although his choices may be unconventional, I trust his judgment and view his coding ability as aspirational.

Business Redesign Write Up - Darcy Rose

I was responsible for the index page, location page, and order page, as well as a good chunk of the original CSS styling. I created the navbar and footer that we used across each page. I also had a small role in implementing a scalable font for the headers so that there was no overflow. The areas of which I am most proud are the gallery that expands images upon clicking, and the iframe map on the locations page. Both of these techniques were new to me, but I challenged myself to try new things.

I consider myself to have been communicative without micromanaging during this project. Upon self-assessment, areas for improvement would be to have more faith in my teammates and their timely completion. I also would like to have applied more JavaScript coding myself, as I feel I could use the practice.
